CT - závěr:

- edematózní pankreatitis + volná tekutina v DB
- vedlejší nález: “dva nespecifické hypodenzní okrsky (S3 a S7), v CT obraze nejasné etio.”

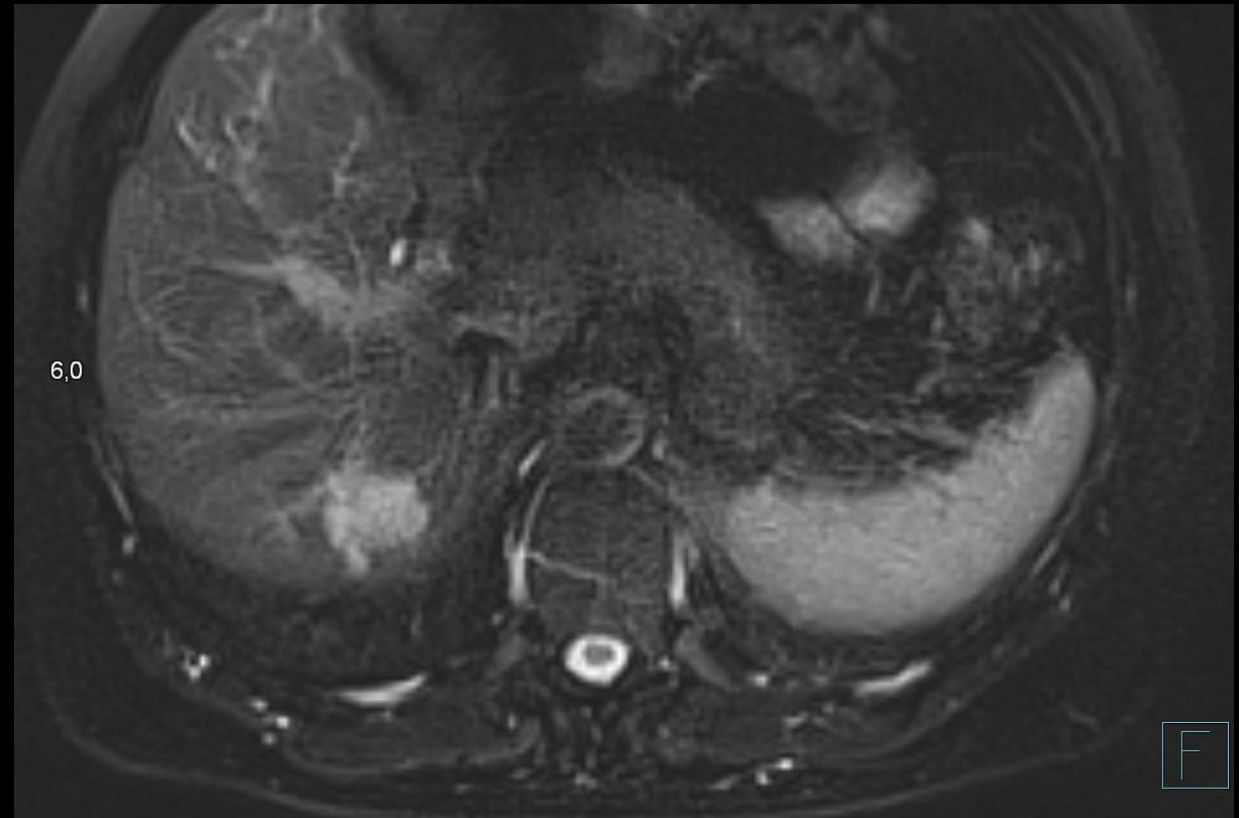

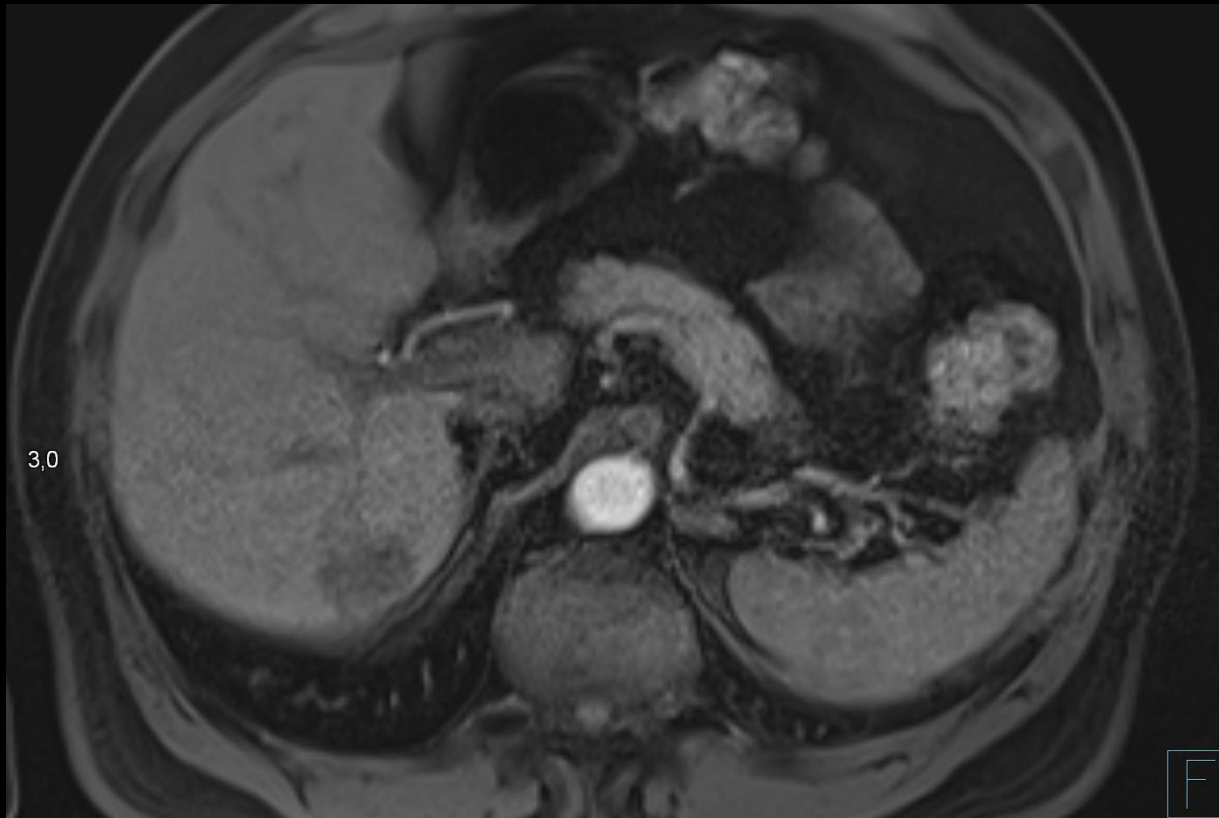

CEUS

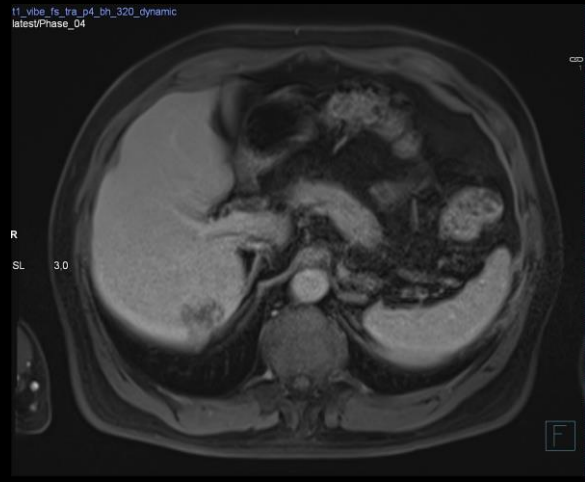

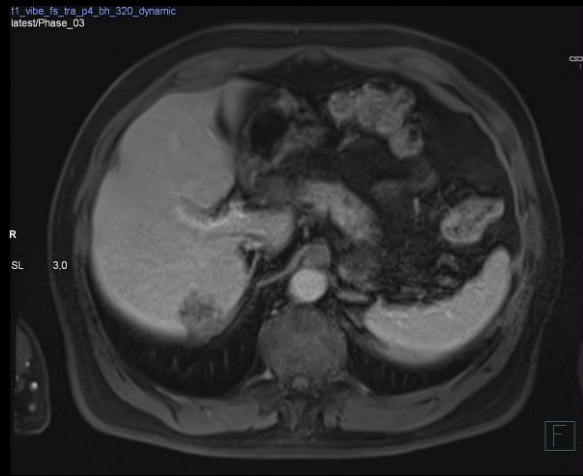

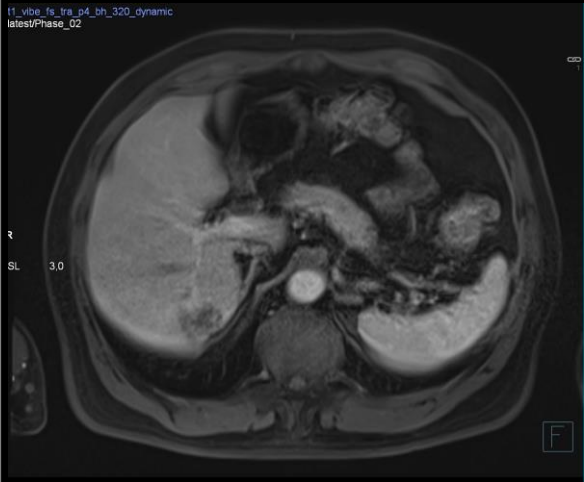

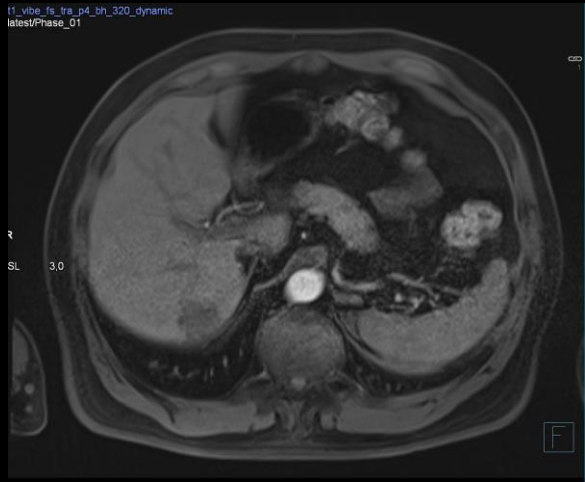

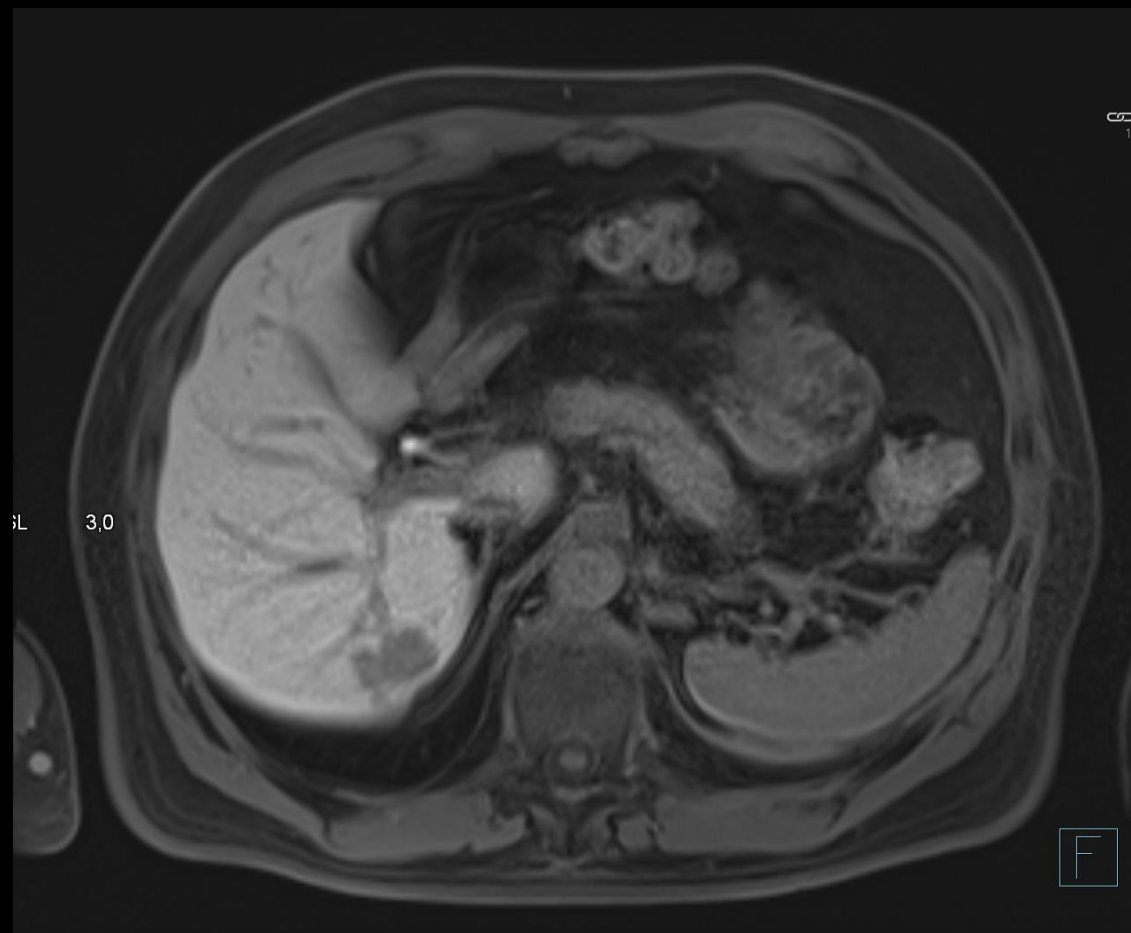

CEUS – závěr:

- Dvě hyperechogenní ložiska, v metodě CEUS nespecifický obraz – v dif. dg.: atypický hemangiom či primární tumor (naznačený wash-out, ale ne zcela charakteristický pro typické malignity). Doporučuji dovyšetřit MR.

MRI

MR – závěr:

- Dvě ložiska jater dle MR charakteru hemangiomů
