

UNIVERSITY HOSPITAL BRNO

■ ■ ■ ■ HIGH PROFESSIONAL LEVEL OF OUR DOCTORS AND COMPREHENSIVE MEDICINE CARE MAKE US THE BEST ■ ■ ■ ■

Words of Director

History of the University Hospital Brno dates back to the thirties of the 20th century when the first buildings appeared, first the city disease-house, later the small hospital building and then other pavilions. Since then, many things have radically been changed in the premises of the hospital as well as in the sphere of medicine. Nowadays, the University Hospital Brno is the huge complex of buildings and the centre of modern care for human health, both in Moravia and throughout the Czech Republic. As any institution, we also have new strategic projects which can guarantee high quality services for our patients. We are the top-quality centre of adult and paediatric medicine; our doctors are included in the science-research teams, professional companies and academic workplaces. This presentation publication will briefly introduce you to the University Hospital in Brno.

I wish good health to everyone of you.

MUDr. Roman Kraus, MBA
Director of the University Hospital Brno

Brno is the second largest city in the Czech Republic. There are almost 400 thousand inhabitants. Other 150 thousand people commute to Brno every day to work. The city is a major centre of science, research, trade fair and innovative industry. It is also the city of universities with over 80,000 students in 14 universities.

The city of Brno is associated with many famous personalities; mainly the composer Leoš Janáček (1854-1928) and the founder of genetics Gregor Johann Mendel (1822-1884).

The architectural dominants of the city are the Cathedral of St. Peter and Paul, Špilberk Castle and the well-known functionalist villa Tugendhat included in the UNESCO List of World Heritage Sites.

The University Hospital Brno is the medical centre for the entire region covering the service area of more than one million inhabitants.

Children's Hospital

The Children's Hospital of the University Hospital in Brno is a specialized and comprehensive facility for paediatric patients from their birth up to 19 years of age. The Children's Hospital includes several specialized centres belonging to the leading European workplaces of this kind. This hospital is a paediatric-oncological centre for the region of Moravia and Silesia. Since 2000 there has been one of two highly specialized children's trauma-centres in the Czech Republic.

Maternity Hospital

The Maternity Hospital in Obilní Trh is one of two workplaces of the Gynecology and Obstetrics Clinic of the Faculty of Medicine at the Masaryk's University and the University Hospital Brno; the Maternity Hospital provides comprehensive obstetric, gynecological, onco-gynecological and highly specialized

comprehensive care in the field of perinatal medicine and assisted reproduction.

At the end of the 70s there was the beginning of successful program of out-of-body fertilization; the method of in vitro fertilization was introduced into clinical practice in 1986. The Centre of Assisted Reproduction 01 Brno currently offers all known methods and techniques of artificial fertilization.

Bohunice premises of the University Hospital Brno

History and Present Times

The University Hospital Brno was established by the Ministry of Health of the Czech Republic. The primary source of financing is the income earned for medical treatment provided by health insurance companies. Modern equipment, teams of professionals, comprehensive diagnostic and therapeutic facilities and close scientific and research co-operation with the Masaryk University in Brno make the University Hospital Brno one of the top facilities in the Czech healthcare system. Our hospital provides the Trauma-team of the Czech Republic which is used in emergency disasters in Europe and all over the world.

BOHUNICE PREMISES

The first building of the Bohunice premises was the city disease-house opened in 1934. After World War II there was strong need to build up a hospital for Brno. The hospital began to gradually grow up in 1969. The so-called Bed-tract (pavilion L), which is the dominant of the Bohunice premises of the University Hospital Brno, was officially opened at the end of 1989. In 1992, the complex of central surgery operation halls was built up there, the largest halls of this kind in the Moravia region.

The hospital in Bohunice has been operating as the Trauma-centre for adults since 2008. It is used for the patients from the regions of South-Moravia, part of the region of Zlín and the region called Vysočina. In 2010, the Spinal Departments and the second Intensive Care Unit of the Orthopedic Clinic were established; they became the last building stone in the mosaic of the new Trauma-centre of the University Hospital Brno (the largest one in the Czech Republic). Air transport patients are taken in two heliports, the second of which was established in September 2015.

CHILDREN'S HOSPITAL

The beginning times of the Children's Hospital are related to the year 1899 when the Hospital of Franz Joseph I began to operate in Černá Pole. After the Second World War, the Land National Committee decided to renovate and complete the hospital. In 1957, the Children's Hospital became the University Children's Hospital. At the present times, the Clinic of Paediatric Oncology is very reputable, specializing in treatment of solid tumors of children from all over Moravia region. In 2006, the new intensive care unit was established there – department for transplantation. Since 2000 there has been one of two high-specialized children's trauma-centres operating in the Children's Hospital, one of the two in the Czech Republic.

MATERNITY HOSPITAL

History of the Maternity Hospital in Obilní Trh begins in 1888 when the Land Maternity Hospital was established at this place. Shortly after establishment of the Czechoslovak Republic and after founding of Masaryk University, the Maternity Hospital was used as the place for teaching Obstetrics and Gynecology. The Gynecology and Obstetrics Clinic of the Faculty of Medicine at the Masaryk's University was established in these times and it has still been operating. In the 50s of the 20th century, the emphasis was placed on cooperation between the departments of obstetrics and pediatrics; there was development of neonatology. In the second half of the 80s of the 20th century, this department became a pioneer in assisted reproduction. Currently, it provides the patients and women in childbeds with comprehensive care within the full spectrum of the field.

Modernization of the University Hospital Brno

MOST ADVANCED MATERNITY HOSPITAL – PROJECT OF UNIVERSITY HOSPITAL BRNO

The Clinic of Gynecology and Obstetrics of the Faculty of Medicine at the Masaryk's University and the University Hospital Brno belongs to the largest obstetrics departments in the Czech Republic and also in Central Europe. There are over six thousand births carried out annually. Currently, it is located in two places – the Maternity Hospital in Obilní Trh and in the premises of the University Hospital Brno in Bohunice. For this reason, construction of the state-of-the-art maternity hospital is planned in the Bohunice premises. This would centralize both the departments together. Construction of the new maternity hospital belongs to the most strategic projects of the Ministry of Health of the Czech Republic, having the budget of CZK 1.9 billion.

PSYCHIATRIC CLINIC OF FN BRNO WILL UNDERGO LARGE RECONSTRUCTION

The Psychiatric Clinic of the Faculty of Medicine at the Masaryk's University and the University Hospital Brno provides acute psychiatric care and community services corresponding to the so-called Centre of Mental Health. The main building of the clinic will undergo total reconstruction and will be supplemented by two low-floor extension buildings. In case of psychiatric care, use of the exterior is very significant, which is heavily reflected in the overall concept of arrangement of the building and its interconnection with park and landscaping works. The project will be co-financed by the European Union (IROP) and the Ministry of Health of the Czech Republic; expected investment reaches CZK 500 million.
